

Vaporesso XROS 6 vs OXVA NeXLIM 2 UK Review

The Vaporesso XROS series has earned a reputation for being one of the safest recommendations in the [refillable pod kit](#) market. It is reliable, easy to use and backed by a mature ecosystem of pods that millions of vapers already trust. With the arrival of the [Vaporesso XROS 6](#), Vaporesso hasn't tried to reinvent the formula. Instead, it has refined it with a larger battery, faster charging and the latest [COREX 3.0 technology](#).

The **OXVA NeXLIM 2** takes a different route.

Rather than building on familiarity, it focuses on performance. A larger battery, higher power output and UniTech 3.0 dual mesh pods make it one of the most capable pod kits OXVA has produced. It is designed for vapers who want stronger flavour, [longer battery life](#) and a device that feels a little more powerful without becoming complicated.

On paper, the two kits appear remarkably close.

Both are compact enough to carry all day. Both support refillable 2ml pods for the UK market. Both feature bright colour displays, adjustable airflow and fast USB-C charging. They are also priced closely enough that cost is unlikely to be the deciding factor.

The real question is what you value most.

Do you want a [pod kit](#) that builds on years of proven reliability and offers one of the widest pod ecosystems available? Or would you rather have a newer platform that pushes flavour and battery performance as far as possible?

This comparison looks beyond the specification sheet.

We'll compare how each device performs in everyday use, from battery life and charging to flavour, airflow and pod longevity. By the end, you should have a much clearer idea of which pod kit deserves a place in your pocket.

Specs at a Glance

Vaporesso XROS 6

- 1800mAh built-in battery

- Up to 30W output
- COREX 3.0 heating technology
- Compatible with every XROS pod
- 0.88-inch TFT display
- USB-C 3A fast charging
- Adjustable airflow
- Auto-draw and button activation

OXVA NeXLIM 2

- 2000mAh built-in battery
- Up to 40W output
- UniTech 3.0 dual mesh pods
- 0.85-inch TFT display
- USB-C 3A fast charging
- Boost and Eco modes
- Adjustable airflow
- Auto-draw activation

Looking at the specifications alone, the NeXLIM 2 appears to have the upper hand. It offers more battery capacity and higher maximum power.

The XROS 6, however, has one major advantage that cannot be measured by numbers alone. It is compatible with the entire XROS pod range, giving users access to multiple resistances without having to invest in a completely new platform.

As you'll see throughout this comparison, both manufacturers have chosen different priorities.

Design and Build Quality

[Vaporesso](#) and [OXVA](#) have very different design philosophies, and that becomes obvious the moment you pick these devices up.

The XROS 6 feels refined.

Its aluminium alloy body is slim, lightweight and comfortable to carry all day. The rounded edges sit naturally in your hand, while the slightly larger 0.88-inch display gives the front of the device a modern appearance without looking overly busy.

It is the sort of [pod kit](#) that slips into a pocket and disappears until you need it.

The NeXLIM 2 feels more substantial.

Its zinc alloy construction gives it extra weight and a reassuring sense of durability. Although it is slightly larger than the [XROS 6](#), the difference isn't enough to affect portability. Instead, it feels like OXVA has used the additional space to create a sturdier device with room for the larger battery.

Both displays are bright and easy to read indoors or outside.

Battery percentage, wattage and pod resistance are all clearly presented, making it easy to check your settings at a glance. Neither screen feels cluttered, and both are responsive when navigating the menu.

Build quality is excellent across both devices.

There are no loose panels, rattling pods or cheap-feeling plastics. The airflow sliders move smoothly, the pods fit securely and the overall finish reflects the premium end of the pod kit market.

If appearance matters most, the XROS 6 has the edge.

Its slimmer profile and minimalist styling make it one of the smartest-looking [pod kits](#) currently available.

If you prefer a device that feels solid and performance-focused, the NeXLIM 2 is likely to leave a stronger impression.

Design Winner - Vaporesso XROS 6

The difference isn't huge, but the slimmer body, polished finish and excellent ergonomics give it a slight advantage for everyday carry.

Battery Life and Charging

[Battery](#) performance is one of the first things many vapers look at when choosing a new pod kit, and both devices deliver improvements over their predecessors.

The XROS 6 houses an 1800mAh battery, making it one of the [largest batteries](#) ever fitted to a XROS device.

The NeXLIM 2 goes one step further with a **2000mAh battery**, giving it around 11% more capacity.

That may not sound like a dramatic increase, but it becomes noticeable during heavier use.

Someone who spends most of the day vaping at higher wattages will generally get more time between charges with the NeXLIM 2. The difference isn't measured in hours, but it is enough to reduce battery anxiety if you're away from home for long periods.

The XROS 6 performs extremely well in its own right.

Because it is designed primarily for lower wattage MTL vaping, the 1800mAh battery stretches surprisingly far. Most users will still finish the day with charge remaining, particularly when using the 0.8Ω or 1.0Ω pods.

Where both devices shine is charging speed.

Both support 3A USB-C fast charging, allowing you to get back to vaping quickly instead of waiting around for a full recharge.

For many people, a short top-up during lunch is enough to cover the rest of the day.

Battery Winner - OXVA NeXLIM 2

The larger battery gives it a genuine advantage, especially for heavier vapers or anyone who regularly uses lower-resistance pods.

Pods and Coil Technology

This is where the comparison becomes much more interesting.

Both devices produce excellent flavour, but they go about it in very different ways. [Vaporesso](#) has focused on refining a proven platform, while [OXVA](#) has introduced new technology designed to squeeze more performance from every puff.

The result is two pod systems that feel noticeably different in daily use.

The [Vaporesso XROS 6](#) uses the latest [COREX 3.0](#) heating technology. Vaporesso has redesigned the mesh structure and improved the cotton inside the pod to deliver more even heating and better flavour consistency from the first puff to the last.

The biggest advantage, however, is compatibility.

The XROS 6 works with the entire XROS pod family, making it one of the most versatile refillable pod systems available.

Depending on your vaping style, you can choose from multiple pod resistances, including:

- 0.4Ω for restricted direct-to-lung vaping
- 0.6Ω for a looser draw
- 0.8Ω for everyday MTL vaping
- 1.0Ω for a tighter cigarette-like inhale
- 1.2Ω for an even more restricted draw

If you've owned a XROS device before, there's a good chance you already have compatible pods at home.

That level of backwards compatibility shouldn't be overlooked. It keeps running costs predictable and makes upgrading to the XROS 6 incredibly straightforward.

The OXVA NeXLIM 2 takes a different approach.

Instead of offering a wider pod ecosystem, it focuses on extracting as much performance as possible from its dedicated UniTech 3.0 pods.

Each pod contains **dual mesh coils** rather than a single mesh.

In Boost Mode, both mesh elements work together, increasing the heating surface and producing denser vapour with stronger flavour.

Switch to Eco Mode and the device alternates between the two meshes instead. This reduces power consumption while helping extend both battery life and pod lifespan.

It's a genuinely clever system.

Rather than forcing you to choose between flavour and efficiency, OXVA lets you switch between the two depending on how you're vaping that day.

The available pods are simpler than Vaporesso's range.

You get:

- 0.6Ω for restricted direct-to-lung vaping

- 0.8Ω for mouth-to-lung vaping

That might seem limiting, but for many people those are the two resistances they use most often anyway.

If you're the type of vaper who likes experimenting with different inhale styles, the XROS 6 offers more flexibility.

If you'd rather have fewer options that perform exceptionally well, the NeXLIM 2 makes a compelling case.

Pod Compatibility Winner - Vaporesso XROS 6

Flavour Innovation Winner - OXVA NeXLIM 2

Flavour and Vapour Production

Both kits produce excellent flavour, but they don't produce the same kind of vape.

The XROS 6 is smooth, balanced and consistent.

Every puff feels almost identical to the last, which is one of the reasons the XROS range has built such a loyal following. Whether you're vaping fruit, [tobacco](#), [dessert](#) or [menthol flavours](#), the device delivers clean flavour without becoming overly warm.

It is particularly impressive with [nic salts](#).

The draw is smooth, quiet and refined, making it an excellent choice for former smokers or anyone who spends most of the day [mouth-to-lung vaping](#).

The OXVA NeXLIM 2 is more aggressive.

Its dual mesh pods generate noticeably denser vapour and a warmer inhale, especially when paired with the 0.6Ω pod in Boost Mode.

The difference is easy to notice.

Fruit flavours taste brighter.

Desserts feel richer.

Ice flavours carry a stronger cooling sensation.

The NeXLIM 2 simply pushes more flavour through each puff.

That doesn't necessarily make it better for everyone.

Some vapers prefer a cooler, smoother vape that stays consistent throughout the day. Others want every inhale to feel bold and saturated.

These two devices cater to those different preferences remarkably well.

If you mainly vape:

- **20mg nic salts** with a tight MTL draw, the XROS 6 feels incredibly polished.
- **5mg or 10mg nic salts** with a slightly looser inhale, both perform well.
- **Lower-strength freebase liquids**, the NeXLIM 2 begins to pull ahead thanks to its extra power.

Flavour Winner - OXVA NeXLIM 2

Consistency Winner - Vaporesso XROS 6

Airflow and Draw Styles

Airflow adjustment has become an essential feature on [premium pod kits](#), and thankfully both manufacturers have implemented it well.

The XROS 6 offers a wide adjustment range that works particularly well for [mouth-to-lung vaping](#).

Close the airflow down and you'll get a tight, cigarette-like inhale that's ideal for higher-strength [nic salts](#).

Open it up and the draw becomes noticeably looser without feeling turbulent.

The NeXLIM 2 offers a similarly smooth airflow slider but feels more comfortable at the airier end of the spectrum.

Combined with the 0.6Ω pod and higher wattage, it delivers a restricted direct-to-lung vape that produces significantly more vapour than most traditional pod systems.

In simple terms:

- Choose the **XROS 6** if you mainly vape MTL.

- Choose the **NeXLIM 2** if you regularly switch between MTL and RDL.

Neither airflow system feels restrictive or awkward to adjust, and both hold their position well during everyday use. They simply prioritise different styles of vaping.

Ease of Use and Features

Neither of these [pod kits](#) is difficult to use, but they appeal to slightly different types of vaper.

- The **Vaporesso XROS 6** keeps things straightforward. Fill the pod, insert it into the device and you're ready to vape. The chipset handles the hard work in the background, allowing you to focus on the experience rather than the settings.

If you've used a XROS device before, the learning curve is practically non-existent.

- The **NeXLIM 2** offers a little more interaction without becoming intimidating. Switching between Boost and Eco modes takes only a few seconds, giving you the option to prioritise either flavour or battery life depending on the situation.

Both devices include features you'd expect from a premium pod kit.

These include:

- Bright TFT colour displays
- Battery percentage indicators
- Adjustable airflow
- USB-C fast charging
- Clear pod visibility
- Responsive auto-draw activation

The XROS 6 adds button activation alongside auto-draw, giving users the choice of how they prefer to vape. Some people enjoy pressing a button before each inhale, while others never use it. Having both options is a nice touch rather than an essential feature.

The [NeXLIM 2](#) relies solely on auto-draw, but it does so exceptionally well. Activation is quick and consistent, even when the airflow is almost fully closed.

For most users, either device will feel intuitive within a few minutes.

Ease of Use Winner - Draw

The [XROS 6](#) benefits from its familiar interface and button activation, while the NeXLIM 2 counters with an incredibly simple, reliable auto-draw system.

Pod Compatibility and Running Costs

Buying the device is only part of the investment.

Replacement pods are something you'll continue buying, so it's worth considering the long-term picture.

- This is where the XROS 6 has one of its biggest advantages.

The XROS platform has been around for several generations, and replacement pods are widely available in multiple resistances. Whether you prefer a tight MTL draw or something a little airier, chances are Vaporesso already has a pod that suits your style.

For existing XROS users, upgrading is especially easy. You won't need to replace your collection of pods, and you can continue using the resistances you're already familiar with.

- The NeXLIM 2 has a smaller ecosystem, but there is an upside.

OXVA has built the device specifically around its UniTech 3.0 pods, allowing the hardware and software to work together more closely. Instead of supporting multiple generations of pods, everything has been optimised for this particular platform.

Pod lifespan is impressive on both devices. With proper priming and suitable [e-liquid](#), most users can expect excellent longevity before flavour begins to decline. As always, sweeter liquids will shorten [coil life](#) compared with clearer fruit or tobacco blends.

If flexibility matters most, the XROS 6 is difficult to beat. If you're happy sticking with two excellent-performing pods, the NeXLIM 2 won't leave you feeling short-changed.

Running Costs Winner - Vaporesso XROS 6

Its broader pod ecosystem and backwards compatibility make it the more economical choice for existing XROS users.

Which One Should You Buy?

By now, it's probably clear that neither device is objectively better in every category.

Instead, each one has a different audience.

Buy the **Vaporesso XROS 6** if you:

- Already use the XROS platform
- Want access to the widest range of compatible pods
- Mainly vape nic salts
- Prefer a slimmer, lighter device
- Value consistency and reliability over outright power

Buy the **OXVA NeXLIM 2** if you:

- Want the biggest battery
- Prefer stronger flavour from every puff
- Enjoy restricted direct-to-lung vaping
- Like having Boost and Eco modes
- Want a pod kit that feels a little more performance-oriented

For first-time buyers, the decision is surprisingly straightforward.

If your priority is a dependable [mouth-to-lung pod kit](#) with an established ecosystem, the XROS 6 remains one of the safest recommendations on the market.

If your priority is extracting the best possible flavour while keeping the device compact and easy to use, the NeXLIM 2 is arguably the more exciting option.

Final Verdict by Tidal Vape

The Vaporesso XROS 6 and OXVA NeXLIM 2 represent two of the [best refillable pod kits](#) available today, but they succeed for different reasons.

The [XROS 6](#) continues to refine one of vaping's most successful platforms. Its excellent build quality, huge pod compatibility and polished user experience make it a fantastic everyday device that will appeal to both beginners and experienced vapers.

The [NeXLIM 2](#) takes a more performance-focused approach. Its larger battery, higher power output and UniTech 3.0 dual mesh technology produce a richer, more intense vape without sacrificing the simplicity that makes pod kits so popular.

If we were recommending a pod kit to someone already invested in the XROS ecosystem, we'd point them towards the Vaporesso XROS 6 without hesitation.

For someone buying a new premium pod kit today, however, the OXVA NeXLIM 2 just edges ahead.

Its flavour production is exceptional, the battery comfortably lasts through demanding days, and the Boost and Eco modes give it a level of flexibility that genuinely improves everyday use. It feels like a device designed to get the most out of every puff, and for many vapers, that will be enough to make it the better choice.
